Portuguese Foundation for Science and Technology (reference: SFRH/BD/146123/2019)

JOB MARKET PAPER *Do all roads lead to the same destination? Proximity to abortion providers, abortions and their conditions in Portugal.* ([link](#))

Abstract: Portugal legalized abortion in 2007, making it available through the National Health Service (NHS) free-of-charge. This paper analyzes how variations in proximity to an abortion provider affect the probability of aborting and the conditions under which abortions occur, namely when, where, and how. We find suggestive evidence that there are fewer abortions among women living further away from a provider relative to women living closer. We also find evidence that (i) these women abort later, (ii) are more likely to be referred by public hospitals to private clinics and, consequently, (iii) have an increased risk of aborting surgically, an invasive procedure which is more costly than the medical method.
